The HALFEN Spherical Head lock covering will be mounted into precasted concrete elements, which will be lifted again at a later date e.g. cover panels or manhole covers. It is used for generating a planar level surface of the finished part in the region of the transport anchor so that according to customer’s requirement, for example, can be driven.

**Application: prefabricated concrete slab**

The HALFEN Spherical Head lock covering is a set products and is shipped in parts to the customers. It is always installed at the top of each finished part. The associated spherical head anchors are optional.

**Benefits at a glance**

- stainless steel metal parts → fulfills requirements for corrosion protection
- Simple installation → less effort
- Available in 3-load tap
- Provides protection from vandalism

**Sale occurs only as a complete set!**

A set consists of a ringplate, a covering plate, a Rubber recess former including plate with threaded rod and a countersunk screw.
